SAXONIA: Pure Perfection

A synonym for quality, SAXONIA has been a leading international supplier of parts and components for warp knitting machines for many years now.

- Geometry tailored specifically to the application for the highest level of reproducibility.
- Perfect stamping quality, even with extremely hard or alloyed raw materials.
- Perfect edge rounding for gentle processing of even the most delicate yarns.
- Extremely wear-resistant through chrome coating and special hardening and coating technologies.

SAXONIA-guide needles provide the optimum ratio of hardness to elasticity. For the processing of Elastan in particular, the H-version guide needle developed by SAXONIA, which have a surface hardness of 900 – 1000 HV 0.03, have proved themselves in many applications.

SAXONIA provides both a full product range and a large number of custom designs.

Perfect stamping technology combined with perfect rounding – the hallmark of SAXONIA. Perfect quality for stripe-free products, even with extremely fine materials and high machine speeds.

Our guide needles and sinkers are manufactured to the highest standards in terms of rounding, dimensional accuracy, repeat accuracy and thickness.

OEM co-operation means we meet the toughest requirements and provide innovative solutions.

SAXONIA product range:

Complete range of guide needles and sinkers for all leading OEMs.
